The End Of Science: Facing The Limits Of Knowledge In The Twilight Of The Scientific Age By John Horgan

In *The End of Science*, John Horgan makes the case that the era of truly profound scientific revelations about the universe and our place in it is over. Interviewing scientific luminaries such as Stephen Hawking, Francis Crick, and Richard Dawkins, he demonstrates that all the big questions that can be answered have been answered, as science bumps up against fundamental limits. The world cannot give us a “theory of everything,” and modern endeavors such as string theory are “ironic” and “theological” in nature, not scientific, because they are impossible to confirm. Horgan's argument was controversial in 1996, and it remains so today, still firing up debates in labs and on the internet, not least because—as Horgan details in a lengthy new introduction—ironic science is more prevalent than ever. Still, while Horgan offers his critique, grounded in the thinking of the world's leading researchers, he offers homage, too. If science is ending, he maintains, it is only because it has done its work so well.

Editorial Review

Amazon.com Review

In a series of interviews with luminaries of modern science, *Scientific American* senior editor John Horgan conducted a guided tour of the scientific world and where it might be headed in *The End of Science*. The book, which generated great controversy and became a bestseller, now appears in paperback with a new afterword by the author. Through a series of essays in which he visits with such figures as Roger Penrose, Stephen Jay Gould, Stephen Hawking, Freeman Dyson, and others, Horgan captures the distinct personalities of his subjects while investigating whether science may indeed be reaching its end. While this book is in no way dumbed down, it is accessible and can take the general reader to the outer edges of scientific exploration.

From Publishers Weekly

Scientific American columnist Horgan here interviews an impressive array of scientists and philosophers, who seem sharply divided over the prospects and possibilities of science. Among the pessimists, molecular biologist Gunther Stent suggests that science is reaching a point of incremental, diminishing returns as it comes up against the limits of knowledge; philosopher Thomas Kuhn sees science as a nonrational process that does not converge with truth; Vienna-born thinker Paul Feyerabend objects to science's pretensions to certainty and its potential to stamp out the diversity of human thought and culture. More optimistic are particle physicist Edward Witten, pioneer of superstring theory (which posits a universe of 10 dimensions); robotics engineer Hans Moravec, who envisions superintelligent creative robots; and physicist Roger Penrose, who theorizes that quantum effects percolating through the brain underlie consciousness. Other interviewees are Francis Crick, Noam Chomsky, David Bohm, Karl Popper, Murray Gell-Mann, Sheldon Glashow, Ilya Prigogine and Clifford Geertz. Despite the dominant doomsaying tone, this colloquium leaves much room for optimism.

From Library Journal

Rich in provocative ideas and insightful anecdotes, this book investigates a serious question concerning empirical inquiry: Is there a limit to the discovery of theories about nature? The ongoing success of scientific research suggests that a final (ultimate), comprehensive, testable, and effective theory explaining the unity of all reality may soon be forthcoming. Exploring this possibility, Horgan, who writes the interview column for *Scientific American*, introduces the reader to a wide spectrum of opinion, from Francis Crick, Karl Popper, Stephen Hawking, Richard Dawkins, Stanley Miller, Margrin Minsky, Frank Tipler, and Edward Wilson, among others. His probing interviews discuss engaging themes ranging from language, neuroscience, and evolution to quantum physics, complexity and chaos, and cosmology. This celebration of curiosity and speculation as well as of science and reason is a unique contribution to appreciating the human quest for understanding. Recommended for both academic and public science collections. H. James Birx, Canisius Coll., Buffalo, N.Y.

From reader reviews:

Mark Giordano:

Do you have favorite book? Should you have, what is your favorite's book? Guide is very important thing for

us to be aware of everything in the world. Each publication has different aim or maybe goal; it means that book has different type. Some people feel enjoy to spend their the perfect time to read a book. They can be reading whatever they acquire because their hobby will be reading a book. Think about the person who don't like examining a book? Sometime, man feel need book if they found difficult problem as well as exercise. Well, probably you'll have this *The End Of Science: Facing The Limits Of Knowledge In The Twilight Of The Scientific Age*.

Paula Mayo:

Reading can called head hangout, why? Because while you are reading a book specially book entitled *The End Of Science: Facing The Limits Of Knowledge In The Twilight Of The Scientific Age* your thoughts will drift away trough every dimension, wandering in every single aspect that maybe not known for but surely might be your mind friends. Imaging just about every word written in a guide then become one contact form conclusion and explanation this maybe you never get ahead of. *The End Of Science: Facing The Limits Of Knowledge In The Twilight Of The Scientific Age* giving you an additional experience more than blown away your brain but also giving you useful details for your better life in this particular era. So now let us show you the relaxing pattern the following is your body and mind are going to be pleased when you are finished reading it, like winning a game. Do you want to try this extraordinary investing spare time activity?

Christopher Jaeger:

This *The End Of Science: Facing The Limits Of Knowledge In The Twilight Of The Scientific Age* is fresh way for you who has interest to look for some information since it relief your hunger info. Getting deeper you onto it getting knowledge more you know or else you who still having little digest in reading this *The End Of Science: Facing The Limits Of Knowledge In The Twilight Of The Scientific Age* can be the light food to suit your needs because the information inside this book is easy to get by anyone. These books acquire itself in the form that is certainly reachable by anyone, that's why I mean in the e-book application form. People who think that in guide form make them feel tired even dizzy this book is the answer. So there isn't any in reading a guide especially this one. You can find actually looking for. It should be here for you actually. So , don't miss that! Just read this e-book kind for your better life and knowledge.

Maxine Whitley:

As we know that book is very important thing to add our knowledge for everything. By a guide we can know everything we really wish for. A book is a range of written, printed, illustrated or even blank sheet. Every year seemed to be exactly added. This reserve *The End Of Science: Facing The Limits Of Knowledge In The Twilight Of The Scientific Age* was filled about science. Spend your free time to add your knowledge about your technology competence. Some people has various feel when they reading a book. If you know how big benefit of a book, you can truly feel enjoy to read a e-book. In the modern era like today, many ways to get book that you just wanted.
