Thinking and Reasoning: An Introduction to the Psychology of Reason, Judgment and Decision Making By Ken Manktelow, Niall Galbraith

The area of psychological research reviewed in this book is one that is not only increasing in popularity in college curricula, but is also making an ever larger impact on the world outside the classroom. Drawing upon research originally cited in Ken Manktelow's highly successful publication *Reasoning and Thinking*, this completely rewritten textbook reflects on the revolutionary changes that have occurred in the field in recent years, stemming from the huge expansion in research output, as well as new methods and explanations, and the appearance of numerous books on the subject aimed at the popular market.

The main areas covered are probability judgment, deductive and inductive reasoning, decision making, hypothetical thinking and rationality. In each case, the material is almost entirely new, with topics such as the new paradigm in reasoning research, causal reasoning and counterfactual thinking appearing for the first time. The book also presents an extended treatment of decision making research, and contains a chapter on individual and cultural influences on thinking.

Thinking and Reasoning provides a detailed, integrated and approachable treatment of this area of cognitive psychology, and is ideal reading for intermediate and advanced undergraduate students; indeed, for anyone interested in how we draw conclusions and make choices.

Editorial Review

Review

"One of the few textbooks to focus specifically on thinking and reasoning, this book provides a sense both of the history of the field and of its current directions. The coverage of deductive reasoning, intuitive judgment and decision making are particularly thorough. Real-life examples are generously sprinkled throughout, making the material engaging for students." - **Keith J. Holyoak, Distinguished Professor of Psychology, University of California, Los Angeles, USA**

"*Thinking and Reasoning* provides a masterly overview of how our minds understand and solve complex problems. Manktelow has written a clear and lucid book describing the state of the art in psychological understanding of key topics in deduction, propositional reasoning, hypothesis testing, thinking about risk and probability, and decision making. Compelling examples illustrate fundamental principles, and numerous practical applications are described. This book will be a valuable source for students and researchers." - **David Shanks, Professor of Psychology, University College London, UK**

"*Thinking and Reasoning* is Professor Ken Manktelow's follow-up to his excellent textbook that was the mainstay of Thinking and Reasoning courses for over 10 years. The book introduces the reader to the major new developments that have occurred in the intervening years that many argue amounts to a new paradigm in reasoning research. As in the previous work, Ken leads the reader safely through this sometimes complex material with his characteristic wit and style." - **Mike Oaksford, Professor of Psychology, Birkbeck College, University of London, UK**

About the Author

Ken Manktelow is professor of Psychology at the University of Wolverhampton. He has worked on conditional, especially deontic, reasoning (with his major collaborator David Over), cognitive development and psycholinguistics, and is currently developing research into decision dilemmas and individual differences in reasoning.

Users Review

From reader reviews:

Ronald Castaneda:

What do you think of book? It is just for students since they are still students or the idea for all people in the world, what the best subject for that? Just you can be answered for that query above. Every person has several personality and hobby for each other. Don't to be compelled someone or something that they don't wish do that. You must know how great in addition to important the book *Thinking and Reasoning: An Introduction to the Psychology of Reason, Judgment and Decision Making*. All type of book is it possible to see on many options. You can look for the internet options or other social media.

Barbara Spangler:

In this 21st millennium, people become competitive in every single way. By being competitive right now, people have to do something to make all of them survive, being in the middle of the particular crowded place and notice through surrounding. One thing that often many people have underestimated the item for a while is reading. Yep, by reading a book your ability to survive increase then having chance to stand up than other is high.
