## The History of Neuroscience in Autobiography, Volume 2 From Academic Press

This book is the second volume of autobiographical essays by distinguished senior neuroscientists; it is part of the first collection of neuroscience writing that is primarily autobiographical. As neuroscience is a young discipline, the contributors to this volume are truly pioneers of scientific research on the brain and spinal cord. This collection of fascinating essays should inform and inspire students and working scientists alike. The general reader interested in science may also find the essays absorbing, as they are essentially human stories about commitment and the pursuit of knowledge.

The contributors included in this volume are: Lloyd M. Beidler, Arvid Carlsson, Donald R. Griffin, Roger Guillemin, Ray Guillery, Masao Ito, Martin G. Larrabee, Jerome Lettvin, Paul D. MacLean, Brenda Milner, Karl H. Pribram, Eugene Roberts and Gunther Stent.

### Key Features

- \* Second volume in a collection of neuroscience writing that is primarily autobiographical
- \* Contributors are senior neuroscientists who are pioneers in the field

### Editorial Review

#### Review

"Anyone interested in the history of science in this century will find the 17 autobiographical essays collected in volume one of **The History of Neuroscience in Autobiography** rich in both facts and in the sociology of science... The book, edited by Larry Squire, a former president of the Society for Neuroscience, was conceived to inform and inspire students and working scientists alike... The essays represent a range of interests and activities as diverse as the field their authors helped build... Above all this book is a treasure of the history, ideas, innovations, and politics that coalesced to produce, and still color, current neuroscience. Anyone entering this field should find the volume valuable for this reason alone."

--SCIENCE

#### From the Back Cover

This is the inaugural volume of autobiographical chapters by distinguished senior neuroscientists and the first collection of neuroscience writing that is primarily autobiographical. Neuroscience is a young discipline, and the contributors to this volume are truly pioneers of scientific research on the brain and spinal cord. Here, they provide recollections about their lives in science.

Though the particular focus of neuroscientific study can vary widely, from molecules to mind, neuroscience describes a community of shared activity directed towards understanding the structure and function of the nervous system. In this volume, 17 illustrious neuroscientists tell the stories of their scientific work, the people that influenced them, and the major events and ideas that shaped their lives. One encounters again and again the same themes: dedication, tenacity, passion, and the sense that the writers have been captured by the intellectual life and by the promise and adventure of studying the nervous system. The result is a collection of fascinating essays that should inform and inspire students and working scientists alike. The general reader interested in science may also find the essays absorbing, as they are essentially human stories about commitment and the pursuit of knowledge.

#### About the Author

Larry R. Squire is Distinguished Professor of Psychiatry, Neurosciences, and Psychology at the University of California, San Diego. He is also a Research Career Scientist at the Veterans Affairs Medical Center in San Diego. Squire is a member of the National Academy of Sciences and a past president of the Society for Neuroscience.
