## Mathematical Topics Between Classical and Quantum Mechanics (Springer Monographs in Mathematics) By Nicholas P. Landsman

This monograph draws on two traditions: the algebraic formulation of quantum mechanics as well as quantum field theory, and the geometric theory of classical mechanics. These are combined in a unified treatment of the theory of Poisson algebras of observables and pure state spaces with a transition probability, which leads on to a discussion of the theory of quantization and the classical limit from this perspective. A prototype of quantization comes from the analogy between the  $C^*$ - algebra of a Lie groupoid and the Poisson algebra of the corresponding Lie algebroid. The parallel between reduction of symplectic manifolds in classical mechanics and induced representations of groups and  $C^*$ - algebras in quantum mechanics plays an equally important role. Examples from physics include constrained quantization, curved spaces, magnetic monopoles, gauge theories, massless particles, and  $\theta$ - vacua. Accessible to mathematicians with some prior knowledge of classical and quantum mechanics, and to mathematical physicists and theoretical physicists with some background in functional analysis.

### **Editorial Review**

### **Users Review**

#### **From reader reviews:**

#### **Charlotte Hawley:**

The book Mathematical Topics Between Classical and Quantum Mechanics (Springer Monographs in Mathematics) can give more knowledge and information about everything you want. So why must we leave a very important thing like a book Mathematical Topics Between Classical and Quantum Mechanics (Springer Monographs in Mathematics)? Wide variety you have a different opinion about publication. But one aim that book can give many information for us. It is absolutely correct. Right now, try to closer with your book. Knowledge or details that you take for that, you may give for each other; you are able to share all of these. Book Mathematical Topics Between Classical and Quantum Mechanics (Springer Monographs in Mathematics) has simple shape however, you know: it has great and big function for you. You can look the enormous world by open and read a publication. So it is very wonderful.

#### **Charles Brewster:**

This book untitled Mathematical Topics Between Classical and Quantum Mechanics (Springer Monographs in Mathematics) to be one of several books which best seller in this year, that's because when you read this book you can get a lot of benefit into it. You will easily to buy this specific book in the book shop or you can order it by using online. The publisher of this book sells the e-book too. It makes you quickly to read this book, since you can read this book in your Cell phone. So there is no reason to you personally to past this publication from your list.

#### **Jack Nguyen:**

Do you have something that you enjoy such as book? The publication lovers usually prefer to choose book like comic, short story and the biggest you are novel. Now, why not seeking Mathematical Topics Between Classical and Quantum Mechanics (Springer Monographs in Mathematics) that give your satisfaction preference will be satisfied by means of reading this book. Reading addiction all over the world can be said as the way for people to know world a great deal better then how they react towards the world. It can't be said constantly that reading behavior only for the geeky man but for all of you who wants to become success person. So , for all of you who want to start examining as your good habit, you could pick Mathematical Topics Between Classical and Quantum Mechanics (Springer Monographs in Mathematics) become your personal starter.

#### **Leroy Moore:**

What is your hobby? Have you heard this question when you got scholars? We believe that that query was given by teacher with their students. Many kinds of hobby, Everybody has different hobby. And also you

know that little person including reading or as looking at become their hobby. You need to understand that reading is very important in addition to book as to be the matter. Book is important thing to include you knowledge, except your current teacher or lecturer. You get good news or update in relation to something by book. Many kinds of books that can you decide to try be your object. One of them is this Mathematical Topics Between Classical and Quantum Mechanics (Springer Monographs in Mathematics).
