Nanoelectronics and Information Technology From Brand: Wiley-VCH

Providing an introduction to electronic materials and device concepts for the major areas of current and future information technology, the value of this book lies in its focus on the underlying principles. Illustrated by contemporary examples, these basic principles will hold, despite the rapid developments in this field, especially emphasizing nanoelectronics.

There is hardly any field where the links between basic science and application are tighter than in nanoelectronics & information technology. As an example, the design of resonant tunneling transistors, single electron devices or molecular electronic structures is simply inconceivable without delving deep into quantum mechanics.

This textbook is primarily aimed at students of physics, electrical engineering and information technology, as well as material science in their 3rd year and higher. It is equally of interest to professionals wanting a broader overview of this hot topic.

"Nanoelectronics and Information Technology" by Rainer Waser and his colleagues is an outstanding compendium of information about an exciting new field. Owing to its high quality and complete coverage of the many topics in this area, this well referenced book will have a long and very useful life as a primary text for students experienced and new in nanoelectronics. It is a very impressive book." (Richard Siegel)

Editorial Review

Review

"... is an outstanding compendium of information about an exciting new field. Owing to its high quality and complete coverage of the many topics in this area, this well referenced book will have a long and very useful life as a primary text for students experienced and new in nanoelectronics. It is a very impressive book."

Prof. Richard Siegel, US Nano-Initiative

"The editor and contributing authors obviously did an excellent job in compiling this book. ... This is a well-written textbook covering a very broad spectrum of topics related to materials and devices. The editor brought together an impressive group of experts to write on their own fields. ... The book is very well structured. Each section starts with a general introduction to prepare readers with general background and concepts as well as a guide to the following individual chapters. ... I am sure that I shall consult this book frequently for both research and teaching."

Guozhong Cao,

University of Washington,

Department of Material Science and Engineering, Seattle,

Advanced Materials, October 18, 2004

From the Back Cover

Providing an introduction to electronic materials and device concepts for the major areas of current and future information technology, the value of this book lies in its focus on the underlying principles. Illustrated by contemporary examples, these basic principles will hold, despite the rapid developments in this field, especially emphasizing nanoelectronics.

There is hardly any field where the links between basic science and application are tighter than in nanoelectronics & information technology. As an example, the design of resonant tunneling transistors, single electron devices or molecular electronic structure is simply inconceivable without delving deep into quantum mechanics.

This textbook is primarily aimed at students of physics, electrical engineering and information technology, as well as material science in their 3rd year and higher. It is equally of interest to professional wanting a broader overview of this hot topic.

About the Author

The Editor:

Rainer Waser is Professor of Physics at the faculty for Electrical Engineering and Information Technology of the RWTH Aachen University and Director at the Institute of Solid State Research (IFF) at the HGF Research Center Jülich, Germany.

In 1984, he received his PhD in physical chemistry at the University of Darmstadt, and worked at the Philips Research Laboratory, Aachen, until he was appointed professor in 1992. His research group is focused on fundamental aspects of electronic materials and on such integrated devices as non-volatile memories, specifically ferroelectric memories, logic devices, sensors and actuators. Throughout, he has been collaborating with major semiconductor industries in Europe, the US, and the Far East. He has been honored

with the IEEE "Ferroelectrics Recognition Award 2000".

Rainer Waser has organized several international conferences, published about 200 technical papers and holds ten patents. Since 2001, he has been the coordinator of the research program Information Technology and Nanoelectronics within the German National Research Centers (Helmholtz-Gemeinschaft).

Users Review

From reader reviews:

Ronald Fowler:

As people who live in typically the modest era should be up-date about what going on or data even knowledge to make these people keep up with the era that is always change and make progress. Some of you maybe may update themselves by reading through books. It is a good choice for yourself but the problems coming to an individual is you don't know which one you should start with. This Nanoelectronics and Information Technology is our recommendation so you keep up with the world. Why, because this book serves what you want and want in this era.

Christine Furst:

People live in this new day of lifestyle always try and and must have the spare time or they will get lot of stress from both day to day life and work. So , when we ask do people have spare time, we will say absolutely yes. People is human not only a robot. Then we inquire again, what kind of activity do you possess when the spare time coming to anyone of course your answer can unlimited right. Then ever try this one, reading guides. It can be your alternative throughout spending your spare time, typically the book you have read is usually Nanoelectronics and Information Technology.

Jeffrey Diaz:

You will get this Nanoelectronics and Information Technology by browse the bookstore or Mall. Only viewing or reviewing it may to be your solve difficulty if you get difficulties for the knowledge. Kinds of this book are various. Not only through written or printed but can you enjoy this book simply by e-book. In the modern era just like now, you just looking by your mobile phone and searching what your problem. Right now, choose your own personal ways to get more information about your book. It is most important to arrange yourself to make your knowledge are still upgrade. Let's try to choose suitable ways for you.

Wanda Pence:

Reading a publication make you to get more knowledge from it. You can take knowledge and information coming from a book. Book is prepared or printed or outlined from each source in which filled update of news. On this modern era like now, many ways to get information are available for you. From media social such as newspaper, magazines, science publication, encyclopedia, reference book, fresh and comic. You can add your understanding by that book. Do you want to spend your spare time to open your book? Or just in search of the Nanoelectronics and Information Technology when you desired it?
