The Coming China Wars: Where They Will Be Fought and How They Can Be Won, Revised and Expanded Edition By Peter Navarro

For years, China has served as the "factory floor" for global production, driving down prices for consumers worldwide. But, unfortunately, China's rapid and chaotic industrialization has put it on a collision course with the rest of the world. **The Coming China Wars** was the first book to systematically cover all those conflicts: political, economic, and environmental. Now, in this new edition, Dr. Peter Navarro has thoroughly updated the entire book. You'll find new chapters on the danger posed by China's flood of defective products and contaminated food; China's dramatic military expansion and the rising threat of a "hot war"; China's space program and its profound strategic implications; China's growing suppression of human rights and free speech; and much more. The coming China Wars will be fought over everything from decent jobs, livable wages, and advanced technologies to strategic resources...and eventually to our most basic of all needs: bread, water, and air. Unless all nations immediately address these impending conflicts, the results may be catastrophic. Like the First Edition, this book demands that we think much more deeply about how to stop the coming China Wars, laying out hard choices that must be made sooner rather than later. This new edition offers even more policy recommendations, including original contributions from several of the world's most important China experts.

Editorial Review

From Publishers Weekly

In this comprehensive, contemporary look at the awakening giant that is China, Peter Navarro describes an emerging power beleaguered by both internal and external threats—if the Japanese don't get them, AIDS and SARS will. This will reassure those readers who are increasingly convinced that the Chinese will eat us for lunch. However, as Navarro points out, China's human and natural resources make her a formidable global player—and her native, amoral ruthlessness suggests she will win. Still, as a nation undergoing its Industrial Revolution in the Information Age, China has her problems transitioning from Communism to capitalist imperialism, as seems to be her goal. True, government and industry have forged strong bonds (that allow them to exploit slave labor and ignore environmental and economic constraints that hamper other nations), but like any modern nation, China is paying the price of competing in a global economy: pollution; rapacious private medical care expenses; an aging, under-pensioned population; international tensions; and a large and disgruntled peasant working class. Navarro, whose inclination to breathless hyperbole makes even a chapter on dam construction exciting, tellingly devotes 10 chapters to China's problems and one to their solution—essentially tired policy prescriptions (wean the U.S. from oil dependence and cheap Chinese imports). This informative book will teach readers to understand the dragon, just not how to vanquish it.
